What is LUMAKRAS™?
LUMAKRAS™ is a prescription medicine used to treat adults with non-small cell lung cancer (NSCLC):
• that has spread to other parts of the body or cannot be removed by surgery, and
• whose tumor has an abnormal KRAS G12C gene, and
• who have received at least one prior treatment for their cancer.
Your healthcare provider will perform a test to make sure that LUMAKRAS™ is right for you. It is not known if LUMAKRAS™ is safe and effective in children.

Important Safety Information

What should I tell my healthcare provider before taking LUMAKRAS™?
• Before taking LUMAKRAS™, tell your healthcare provider about all your medical conditions, including if you:
  o have liver problems
  o have lung or breathing problems other than lung cancer
  o are pregnant or plan to become pregnant. It is not known if LUMAKRAS™ will harm your unborn baby.
  o are breastfeeding or plan to breastfeed. It is not known if LUMAKRAS™ passes into your breast milk. Do not breastfeed during treatment with LUMAKRAS™ and for 1 week after the final dose.

Important Safety Information (Continued)

What should I tell my healthcare provider before taking LUMAKRAS™?

• Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, dietary and herbal supplements. LUMAKRAS™ can affect the way some other medicines work, and some other medicines can affect the way LUMAKRAS™ works.

• Especially tell your healthcare provider if you take antacid medicines, including Proton Pump Inhibitor (PPI) medicines or \( \text{H}_2 \) blockers during treatment with LUMAKRAS™. Ask your healthcare provider if you are not sure.

Please see Important Safety Information throughout and full Important Safety Information on page 6. Click here for full Prescribing Information and Patient Information.

Important Safety Information (Continued)

**LUMAKRAS™ may cause serious side effects, including:**
- Liver problems: LUMAKRAS™ may cause abnormal liver blood test results. Your healthcare provider should do blood tests before starting and during treatment with LUMAKRAS™ to check your liver function. Tell your healthcare provider right away if you get any signs or symptoms of liver problems, including: your skin or the white part of your eyes turns yellow (jaundice), dark or “tea-colored” urine, light-colored stools (bowel movements), tiredness or weakness, nausea or vomiting, bleeding or bruising, loss of appetite, and pain, aching, or tenderness on the right side of your stomach-area (abdomen).

Please see Important Safety Information throughout and full Important Safety Information on page 6. Click here for full Prescribing Information and Patient Information.

Important Safety Information (Continued)

**LUMAKRAS™ may cause serious side effects, including:**

- Lung or breathing problems: LUMAKRAS™ may cause inflammation of the lungs that can lead to death. Tell your healthcare provider or get emergency medical help right away if you have new or worsening shortness of breath, cough or fever.
- Your healthcare provider may change your dose, temporarily stop, or permanently stop treatment with LUMAKRAS™ if you develop side effects.

Please see Important Safety Information throughout and full Important Safety Information on page 6. Click here for full Prescribing Information and Patient Information.

Share your questions with your healthcare provider. Have questions about your cancer and treatments? Consider recording them here and taking this to your next appointment. We provided some common questions, but feel free to add some questions of your own.

**QUESTIONS**

**IMPORTANT QUESTIONS FOR MY HEALTHCARE PROVIDER**

What treatment are you putting me on?

Why are you putting me on this treatment?

How does this treatment work?

What are the potential side effects of this treatment?
